Good planets are hard to buy

In the practice and promotion of green procurement, your role as supply professionals is changing. This article explains how and why.
by Larry Berglund, CPP

From garbage to green energy

An Ottawa company is demonstrating how to use gas released at landfill sites to make electricity and other saleable products.
by Lindsay Ames

Debugging degradables

Are you trying to understand what is hype and what is fact when it comes to degradables? There are Canadian standards to help inform your choice... plus, a bit about plastic bag recycling.
by Cathy Cirko

Cool roofs

Construction technology has advanced in the face of demands for greener and better products. Cool roof technology can make a huge difference to the operating costs of a building.
by Scott Kriner

Out of the woods

Plastic lumber products can be an environmentally responsible purchasing choice as well as good to look at and fully functional.
by Robert Waters

Greener lighting

The choices available are not yet perfect, but good lighting options are available now while others are being researched and improved.
by Summit staff

Food to print

Soy based toner is now available in Canada and it offers many benefits in addition to being made from a renewable resource.
by Summit staff

Federal energy contract reduces costs and greens supply

Alberta government departments and PWGSC as well as other federal departments sign on to consolidate energy requirements and purchase green energy.
by Summit staff

meet

Layle Larusson
face to face

Layle is one of the first graduates of the BC government's procurement training program and a marine manager at the BC Ministry of Transportation and Infrastructure.
